AVERT | Global information and education on HIV and AIDS
Human immunodeficiency virus infection and acquired immune deficiency syndrome (HIV/AIDS) is a spectrum of conditions caused by infection with the human immunodeficiency virus (HIV). Following initial infection, a person may not notice any symptoms or may experience a brief period of influenza-like illness. Typically, this is followed by a prolonged period with no symptoms.

Solving AIDS implies overcoming political, economic and social issues as well as technical issues such as medical breakthroughs. For example, many poor countries are actively denied access to AIDS drugs or face threats of sanctions from richer nations and their pharmaceutical industry lobbies for trying to produce cheaper generic versions of their medicine.
