Hip replacement is a surgical procedure in which the hip joint is replaced by a prosthetic implant, that is, a hip prosthesis. Hip replacement surgery can be performed as a total replacement or a hemi (half) replacement. Such joint replacement orthopaedic surgery is generally conducted to relieve arthritis pain or in some hip fractures. A total hip replacement (total hip arthroplasty or THA ...

The ankle, or the talocrural region, is the region where the foot and the leg meet. The ankle includes three joints: the ankle joint proper or talocrural joint, the subtalar joint, and the inferior tibiofibular joint. The movements produced at this joint are dorsiflexion and plantarflexion of the foot. In common usage, the term ankle refers exclusively to the ankle region.

Ankle - Wikipedia
Dr. Watters attended Pepperdine University, where he was a National Merit Scholar and graduated with honors. He then attended Duke University School of Medicine, where he was elected to Alpha Omega Alpha Honor Medical Society and received numerous awards.

Tyler Steven Watters, MD - Raleigh Orthopaedic
Clinical History: A 48 year-old female presents with persistent lateral ankle pain and edema 5 months following trauma. (1a) Sagittal T2-weighted with fat-saturation, (1b) axial T1-weighted, and (1c) coronal intermediate-weighted with fat-saturation images of the right ankle are provided.
