Child And Adolescent Therapy Fourth
Child and adolescent psychiatry or pediatric psychiatry is a branch of psychiatry that focuses on the diagnosis, treatment, and prevention of mental disorders in children, adolescents, and their families. It investigates the biopsychosocial factors that influence the development and course of these psychiatric disorders and treatment responses to various interventions.

The Rationale for Family Therapy. In the early part of the 20th century, the psychologist Carl Jung noted that children tend to live out the unconscious conflicts of their parents. And, as Family Systems Theory teaches, all too often a child will be marked as a “problem,” the “scapegoat” or “black sheep” of the family—the Identified Patient, in Family Systems language—when ...

Theory. Attachment therapy is a treatment used primarily with fostered or adopted children who have behavioral difficulties, sometimes severe, but including disobedience and perceived lack of gratitude or affection for their caregivers. The children's problems are ascribed to an inability to attach to their new parents, because of suppressed rage due to past maltreatment and abandonment.
