Facts about STDs. The term sexually transmitted disease (STD) is used to refer to a condition passed from one person to another through sexual contact. You can contract an STD by having unprotected vaginal, anal, or oral sex with someone who has the STD. An STD may also be called a sexually transmitted infection (STI) or venereal disease (VD).

Sexually Transmitted Diseases: Types, Symptoms, Diagnosis ...
Sexually transmitted diseases are diseases (infections) that involve the transmission of an infectious organism between sex partners during any sexual activity. Signs and symptoms depend on what type of infectious organism infects the person (bacteria, viruses, protozoan, fungus or parasite).

Sexually Transmitted Diseases (STDs) Symptoms and Signs ...
The herpes simplex virus is one of the most common sexually transmitted diseases. There are two types: HSV-1, which is transmitted from mouth to mouth and type 2 (HSV-2). HSV-1 contraction happens in early childhood with the classic cold sore. Researchers say that HSV-2 is very resistant.

Sexually Transmitted Diseases (STDs): Types and Symptoms
Unprotected sexual contact in the setting of HSV infection promotes the acquisition of HIV infection (odds ratio [OR] 1.7) (e5) and other sexually transmitted diseases. Moreover, studies have shown that HSV-2 infection triples the risk of HIV infection through unprotected sexual intercourse (e6).

The Presentation, Diagnosis, and Treatment of Sexually ...
The World Health Organization published an earlier version of this manual, entitled Laboratory diagnosis of sexually transmitted diseases, in 1999, with the objective of providing a comprehensive guide of standard procedures for isolating, detecting, and diagnosing STIs for microbiologists and medical technologists. It was conceived as a practical

Laboratory diagnosis of sexually transmitted infections ...
Genital herpes is a sexually transmitted disease (STD) caused by the herpes simplex virus type 1 (HSV-1) or type 2 (HSV-2). Infections are transmitted through contact with HSV in lesions, mucosal surfaces, genital secretions, or oral secretions. HSV-1 and HSV-2 can be shed from normal-appearing oral or genital mucosa or skin.
