Progeria is an extremely rare autosomal dominant genetic disorder in which symptoms resembling aspects of aging are manifested at a very early age. Progeria is one of several progeroid syndromes. Those born with progeria typically live to their mid-teens to early twenties. It is a genetic condition that occurs as a new mutation, and is rarely inherited, as carriers usually do not live to ...

Progeria - Wikipedia
The erythrocyte, commonly known as a red blood cell (or RBC), is by far the most common formed element: A single drop of blood contains millions of erythrocytes and just thousands of leukocytes. Specifically, males have about 5.4 million erythrocytes per microliter (µL) of blood, and females have approximately 4.8 million per µL. In fact, erythrocytes are estimated to make up about 25 percent ...

Certain forms of chemotherapy can cause or worsen anemia, usually by interfering with the body’s ability to make new red blood cells. It is also possible for certain forms of cancer to contribute to iron deficiency, either by causing bleeding or by interfering with the body’s ability to absorb iron.
