This is my Grand Unified Theory of Deplorability. In both cases, Trump has been acting from a kind of tribalist sense of loyalty: These are my people and I must defend them, right or wrong. And the more wrong they are, the more compelled he is to defend them, because that's what he sees as his job: Standing up for the people the "elites" see as deplorable.

In physics, a unified field theory (UFT) is a type of field theory that allows all that is usually thought of as fundamental forces and elementary particles to be written in terms of a pair of physical and virtual fields. According to the modern discoveries in physics, forces are not transmitted directly between interacting objects, but instead are described and interrupted by intermediary entities called fields.

The Unified Theory of Psychology refers to four interlocking ideas (the Tree of Knowledge System, the Justification Hypothesis, Behavioral Investment Theory, and the Influence Matrix) that together provide a framework that defines the field of psychology and assimilates and integrates the field's key insights into a coherent whole.

After completing his masterpiece, the General Theory of Relativity in 1916, Albert Einstein spent the rest of his life working fruitlessly on unifying gravity with electromagnetism. His quest was to develop a unified field theory that would unify his General Relativity, a theory of gravitational, with Maxwell electrodynamics.

They called such a theory, modestly, a Grand Unified Theory (GUT). At around the same time, Weinberg and Georgi along with Helen Quinn noticed something interesting—following the work of Frank Wilczek, David Gross, and David Politzer.

A Brief History of the Grand Unified Theory of Physics

Unified field theory,, in particle physics, an attempt to describe all fundamental forces and the relationships between elementary particles in terms of a single theoretical framework. In physics , forces can be described by fields that mediate interactions between separate objects.

A grand unified theory of psychology has been developed. That is, they recognize that as one goes from parts to wholes to groups, there are more and more properties and more and more complexity. We can go from particles to atoms to molecules to cells to plants to animals to humans to societies, for example.

Unified field theory is sometimes called the Theory of Everything (TOE, for short): the long-sought means of tying together all known phenomena to explain the nature and behavior of all matter and energy in existence. In physics, a field refers to an area under the influence of some force, such as gravity or electricity, for example.

A unified theory of evolution should combine both neo-Lamarckian and neo-Darwinian aspects to expand our understanding of how environment impacts evolution. The contributions of Lamarck more than 200 years ago should not be discounted because of Darwin, but instead integrated to generate a more impactful and insightful theory.
