Recent advances in chromatography. Abstract An account of the state of the art in the contemporary practice of gas, liquid, supercritical-fluid, and thin-layer chromatography is presented with an emphasis on column technology, kinetic optimization of column variables, and multidimensional and multimodal chromatographic techniques.

N2 - The newest achievements in the use of thin-Layer chromatography (TLC) for the separation and quantitative determination of natural pigments in various matrices are assembled.

Thin-layer chromatography of natural pigments: New advances

Abstract A review of the recent advances in TLC stationary phases, sample application, developing and quantification devices is presented. Also, a comparison between the properties of TLC and HPTLC is given. The use of modern instrumentation for multiwavelength scanning is discussed.
