Note: Which leg is a or b is irrelevant in the use of the Pythagorean Theorem. Note: The Pythagorean Theorem only works for right triangles. Putting the formula into words, the square of the length of one leg plus the square of the length of the other leg equals the square of the long-side opposite the right angle.

The reason these triangles are considered special is because of the ratios of their sides - they are always the same! Special right triangles hold many applications in both geometry and trigonometry.. In this lesson you will learn the general formula for the ratios, and how to find missing sides of any 30 60 90 right triangle.
