

## *Sustainability Considerations For Procurement Tools And Capabilities Summary Of A*

### **Sustainability Considerations For Procurement Tools**

Triple bottom line considerations. Procurement – the letting of contracts for goods, works and services on the best possible terms – has historically been based on two criteria, price and quality, with a view to maximizing benefits for the procuring organization. Sustainable procurement broadens this framework to take account of third-party consequences of procurement decisions, forming a ...

The pursuit of sustainability can mean many different things to different people. Most commonly it means trying to meet the needs of the present, without compromising the ability of future generations to meet their own needs (Bruntland Commission) or harvesting resources without depleting or damaging them.

Sustainability metrics and indices are measures of sustainability, and attempt to quantify beyond the generic concept. Though there are disagreements among those from different disciplines (and influenced by different political beliefs about the nature of the good society), these disciplines and international organizations have each offered measures or indicators of how to measure the concept.
